

GHG emissions 2021 – Updated information

In August 2022, the decarbonization route for Promigas and its entire corporate body was defined. As part of this process, a review of the methodology and input data in the calculation of the carbon footprint was carried out; generating a reorganization of data and updating of information. Scope 1 emissions decreased and Scope 3 emissions increased considering the CO2 contributions from the purchase of goods and services and from the sale of gas in the distribution chain. The final data is presented below:

| Our carbon footprint 2021, TonCO2eq | | | |
|-------------------------------------|----------|--------------|--------------|
| Scope 1 | Scope 2 | Scope 3 | Total |
| 138.474 | 8.804 | 3'702.530 | |
| 138 473,83 | 8 803,84 | 3 702 529,97 | 3 849 807,63 |
